PROCESS AUTOMATION – BUSINESS PROCESS AUTOMATION

How we bring Claudio to your company

Companies increasingly need to manage their processes effectively, flexibly and dynamically.

Traditional ERP or proprietary systems do not always meet this need with sufficient agility, and investments made need to be safeguarded.

Processes need people. People work more smoothly with collaborative systems.

Problem

Business process automation can increase productivity and profits and meet business needs.

There is a misbelief about automation: people have the perception that they have to immediately automate every single manual process taking place within their activities, introducing drastic and hard to manage changes.

For small businesses, as well as for medium and large enterprises, this misconception leads to the belief that it is better to stay away from automation altogether, and stick to the old, often inefficient, practices.

As a result, many organizations are missing out on the benefits that using automation tools in the workplace will definitely bring.

It is not necessary to automate business operations all at once.

It is important to pick a few processes that need improvement and automate them quickly. The early results will provide exceptional confidence

and momentum for the digital transition.

The ROI evolving around business automation is always worth the risk associated with introducing a new technology.

Solution - Claudio to support business process management and automation

Claudio is able to support business process management through a range of automated tasks, including:

- New employees' onboarding and their training.
- New customers' onboarding.
- Marketing automation and clients' nurturing.
- Cross-selling and up-selling processes.
- Customer service and assistance.
- Auditing processes (production controls,

process effectiveness, bottlenecks, periodic reporting, cashflow, deadlines, etc.).

- IT Operations (Backup, Restore, User Enablements).
- Payroll cycle processes (and all accounting, hours and expense reporting activities).
- Back Office Administrative Processes.
- GDPR policies (automated deletion of user data, automated data processing notices, etc.).
- Report generation, content analysis and information sharing with relevant stakeholders.
- More.

Functional advantages

- User-friendly no-code platform
- Ability to create custom adapters and joints
- Large catalog of ready-to-use applications
- Ready-to-use logical, text, conversion and filter operations
- Automatic workflow triggering (starting from emails, specific events within given applications such as ticket openings, or even just scheduled timings)
- Ability to create reusable templates
- High reliability and resilience of cloud infrastructure

Operational benefits

- Saving budgets and resources on repetitive tasks
- Visualization of every task performed by automation
- Monitoring of flow progress with alerting on dashboards and emails
- Ability to add executable robots on individual PCs for client-side automation
- Ability to easily integrate custom and/or proprietary applications
- Ability to easily integrate with legacy systems

Advanced management of spreadsheets

External Software Integration

BOT for automatic data updating

Automated scanning of on-screen data

Report generation

Inferential data analysis

PROCESS AUTOMATION – BUSINESS PROCESS AUTOMATION

How we bring Claudio into your company

Claudio: the solution for automating your Business

Automating low-value-added activities is the only way to elevate ourselves from a condition of constraint to manual labor to a stage where we strategically create value for the business. We are aware, however, that no activity can be automated unless the tools to do so are made available to all stakeholders.

Claudio is the tool we built to make automation usable. Thanks to our platform, in fact, anyone acquires the ability to generate automation processes autonomously.

Claudio is completely **NO-CODE**: it requires no technical skills and can be used not only by technicians or IT experts, but by anyone: starting from a previously created template or designing a new flow in just a few clicks.

Assessment

Assessment: Explain your requirements

Test

Let's experiment with the solution together, customizing according to your needs.

Configuration

Configuration: We configure the Claudio environment together and develop the first flow.

Training

Final product overview, you can start your new adventure on your own!

DAY ONE

DAY TWO

DAY THREE

DAY FOUR

Please note: This pipeline represents an estimate developed on a number of stakeholders (managers) between 1 and 5.
